[VMware vs Endpoint](#) [7]

Mon, 04/06/2009 - 11:23 ? Jens

You may run into problems if you run the Symantec Endpoint 11 Manager on the same machines as VMware server. Luckily there's an easy workaround...

[Resolving PHP.INI Conflicts with SEP11](#) [13]

Thu, 03/26/2009 - 13:03 ? Jens

When installing Symantec Endpoint Protection Manager on a server already running PHP you may get the following error when you try to log in: ***Unable to communicate with the reporting component.*** This can be caused by conflicting settings in your PHP.INI file. If your existing PHP installation uses a different version than the one supplied by SEP11 then you can remedy this by specifying a version specific PHP.INI in the registry.

[Extending Your Backup Rotation with a Limited Number of Tapes](#) ^[16]

It's quite common for small businesses to have a standalone backup drive and rotate through a small set of backup tapes, one for each day of the week. Many people are under the impression that this is all the protection they need for their business. Provided that the most recent tape is always taken offsite, this is indeed good practice, but it may not be enough.

[SCSI Connections and Cabling Options](#) [22]

When it comes to cabling your SCSI hard drives, you have a dizzying array of choices to make: narrow, wide, high-density, centronics, vhdci, single ended, differential, lvd, etc. Things can get down right confusing when you're trying to add drives to your existing system! But don't let that stop you - our technicians can help you figure out exactly what you need, and help you set it all up when your equipment arrives.
